Strong localization of invariant metrics

Nikolai Nikolov

Talk given at Seminar on Complex Analysis,
meeting 2257, November 4, 2019

We will prove a quantitative version of strong localization of the Kobayashi, Azukawa, and Sibony metrics near a plurisubharmonic peak boundary point of a domain in $\mathbb{C}^n$. As an application, we will obtain a precise result in the strictly pseudoconvex case.

This is a joint work with John Erik Fornæss.
