

Polynomial extension property in the classical Cartan domain of type II

Krzysztof Maciaszek

Talk given at Seminar on Complex Analysis, meeting 2282,
November 2, 2020

The goal of the talk was to present the following theorem:

Theorem 1. *Suppose V is an algebraic subset of the classical Cartan domain of type II in \mathbb{C}^3 , which admits the polynomial extension property. Then V is a holomorphic retract.*
