Hyperbolic domains in real Euclidean spaces

Guicong Su

Talk given at Seminar on Complex Analysis,
meeting 2308, October 25th, 2021

In this talk, we are talking about a pseudometric on any domain in the real
Euclidean space which is introduced by Franc Forstneric and David Kalaj. By
using the pseudometric, we can give a definition of hyperbolicity in the real
domain. And then, we consider another new pseudometic which is introduced
by Barbara Drinovec Drnovsek, to give another description of hyperbolicity
in the real domain.
