

Boundary Behaviour of the Bergman Metric

Dariusz Piekarz

Talk given at Seminar on Complex Analysis,
meeting 2328, May 16th, 2022

The goal is to find estimates on the boundary behavior of the Bergman metric in case of bounded strictly pseudoconvex domain with \mathcal{C}^4 or \mathcal{C}^3 boundary. The talk will be based on the article of K. Diederich and J. E. Fornæss *Boundary Behaviour of the Bergman Metric*.
