

SEMINARIUM UKŁADY DYNAMICZNE

Tytuł: β -free shifts, sofic approximations, and invariant measures
Referent: Michal Kupsa
Data: 8 VI 2018

Arcwise connectedness and entropy-density of extremal points of the simplex of invariant measures for β -free shifts will be presented. We touch as well some motivations connected to number theory and possible generalization of our results. This is a joint work with D. Kwietniak.
