SEMINARIUM UKŁADY DYNAMICZNE

Tytuł: **Cesàro and harmonic limits of empirical measures**
Referent: **Habibeh Pourmand**
Data: **25 V 2018**

In the talk, I will discuss a recent result of Gomilko, Kwietniak, and Lemańczyk saying that Sarnak's conjecture implies Chowla's conjecture along a subsequence. The proof of this fact is based on properties of logarithmic empirical measure for dynamical systems.
